Executive Summary

Motivation and Importance

Pupils often require help and guidance, in addition to lectures and tutorials in the University, from mentors who are experienced and knowledgeable.

This tutorial platform for Hochschule Fulda can help students attain a mutually beneficial relationship.

Those students who require help can use the platform to learn and further their knowledge and skills.

Those students who are skilful in a specific field can share their expertise with the former group, and engage in thought experiments to widen their own understanding and knowledge. This symbiotic relationship can build a stronger academic community in HS Fulda.

Moreover, students often lack financial stability. This provides another opportunity for proficient students to earn money while still contributing to academia.

Functions and Services

Our goal is to create a tutorial website accessed by students, faculty, administration and alumni of HS Fulda.

Students would have the option to tutor, or receive tutorials, face-to-face or online. This flexibility is especially important given the last two years of the pandemic-affected world.

However, the pricing of these facilities should be competitive, fair, and accessible for students who are often on tight budgets.

Free demo sessions can be provided for trial, and discounted subscriptions can be introduced.

Would-be teachers can also have a practice session with long-term students and can be judged by the students. Based on the reviews, the teacher can be hired. To maintain quality, students can rate teachers and the highest rated teachers can be given a bonus.

A review system can be built, to guide the website developers and tutors on what works well, and what needs to be fixed. It would provide students with a platform to post requirements of tutors for a specific skill set, thereby providing an overview of demand.

A Tutorial Support System will be active for both students and tutors in need of help.

This can support students who might require tutoring urgently, to meet deadlines or to prepare for examinations.

It will also support tutors who might not be available to tutor due to unforeseen circumstances, as well as a flexi-tutoring plan.

Team

Fuldemy is our brand new team of technical experts who have wide experiences in building websites in multiple domains.
